Title: MARTHA MOXLEY - VICTIM;
HOMICIDE

Specimens received: March 26, 1997

This report supplements the report previously submitted to you dated February 23, 1998. Refer to that report for a listing of the submitted items.

This report contains the results of the mtDNA examinations, and completes the requested examinations.

The submitted items Q1 through Q4 and processed DNA were returned to you under separate cover. The processed DNA can be found in a package marked PROCESSED DNA SAMPLES: SHOULD BE REFRIGERATED/FROZEN. It is recommended that these samples be stored in a refrigerator/freezer and isolated from evidence that has not been examined.

b7C

Unit: DNA Analysis Unit II

Phone No.: (202) 324-4354

FBI File No.: 95-204722

Lab No.: 70326048 S GY AK

Results of Examinations:

A mitochondrial DNA (mtDNA) sequence was obtained from the Q3 cigarette butt and the Q4 shirt worn by the victim. The mtDNA sequence obtained from Q3 is not suitable for comparison purposes. Therefore, no conclusion could be reached as to whether or not this sequence is consistent with originating from the donor of the Q4 stain. No other mtDNA examinations were conducted.

Dear [redacted],

VICTIM

Pursuant to our recent telephone conversations pertaining to the Martha Moxley Homicide Investigation, I am forwarding to you the following items of evidence:

1. One (1) "Doublemint" brand gum wrapper (designated No. 24-2).
2. One flattened "Marlboro" brand cigarette pack (designated No. 24-1).
3. One flattened cigarette butt, which was located in the Marlboro Pack, (No. 24-1)
4. One shirt worn by the victim (designated K23-A)
5. Sixteen (16) photographs correlated to the above items.
6. Excerpts from [redacted] report on his re-examination of the above items.
7. A summary of the Martha Moxley Homicide Investigation.

Investigators when initially interviewed approximately twenty years ago. They have changed their story dramatically. Unfortunately, at this time these two suspects are not legally accessible.

Please be advised that items No. 1, 2, 3 and 4 have previously been examined, in 1975-1976, by the Connecticut State Police Forensic Laboratory and the Federal Bureau of Investigation. More recently these items were examined by [REDACTED]. I have consulted with [REDACTED] with regards to this endeavor and have his complete support.

b6
b7C

We request that the stains, determined to be blood, on items No. 1, 2 and 3 listed above, be compared with the known blood sample on item No. 4, (designated X23-A).

As we have discussed, our goal is to ascertain whether or not the stains, determined to be blood on items No. 1, 2 and 3 is the blood of our victim, Martha Moxley.

Very truly yours,

[REDACTED]
[REDACTED]
Judicial District of Fairfield

b6
b7C

Item #92 - 24 Marlboro pack and gum wrapper (Q-22)

On 01-14-92 two (2) additional items were submitted to the Laboratory for further examination. Item #92-24 consisted of one (1) "Doublemint" brand gum wrapper (designated #24-2) and one (1) flattened "Marlboro"-brand cigarette pack (#24-1). The following results were obtained upon examination of these items:

1. Macroscopic examination of item #24-2 (gum wrapper) revealed that it had been previously processed with a ninhydrin-like chemical. Brownish stains were observed on the wrapper surface. Photograph # E18 depicts a corner of the wrapper showing some of these stains.

2. Microscopic examination indicated these stains were inconsistent with blood or other body fluids-type stains. Photographs # E19 and # E20 are photomicrographs showing close-up views of these stains.

Photograph # E21 shows an area with some red-colored stains located in the middle of the letter "u".

3. Various stains tested on item #24-2 gave negative results with a chemical screening test for blood, except for one (1) small spot which gave a weak positive result.

4. Macroscopic examination of item #24-1, Marlboro pack, showed the item had been treated with a ninhydrin-like chemical.

5. Reddish-brown stains were observed in several locations on item #24-1, as shown in photographs # E22, #E23, and #E24. Glue-like material also was found on several areas of the cigarette pack, as shown in photographs # E25 and # E26.

6. These stains gave negative results with a chemical test for blood.

7. Mineral particles, glue-like material and some reddish-colored substances were located on the lower portion of the seam area of the cigarette pack, as shown in photograph # E27.

8. Microscopical examination of item #24-1 revealed these mineral particles and reddish substances were adhered to the cigarette pack and imbedded in the glue-like material, as shown in photograph # E28.

9. Photograph # E29 is a close-up photomicrograph of this area. Mineral-like particles are consistent with a quartz-type mineral. The reddish and brownish materials were consistent with tobacco fragments.

10. A small particle of reddish-colored material located on item #24-1 gave positive results with a chemical screening test for blood. Photograph # E30 shows the positive reaction obtained. The quantity of this material was insufficient for further serological testing.

11. A flattened cigarette butt was located in the Marlboro pack (item #24-1). Photograph # E31 depicts this cigarette butt. A brownish-colored stain was found on the filter portion of the cigarette butt.

12. Macroscopic and microscopic examination of this cigarette butt revealed it is consistent with a typical "Marlboro" cigarette.

13. The brownish-stain on the cigarette butt gave weak positive results with a chemical screening test for blood. Photograph # E32 shows this weak reaction.

14. Tests for the presence of amylase conducted on a portion of the filter tip area of the cigarette butt were negative.

Serological tests on the filter end of the cigarette butt revealed the presence of "A", "B", and "H" antigenic substances.

15. Laser and alternate light sources were used to examine items #24-1 and #24-2. No fingerprints were found on these items.

ITEM # K-20 continued:

Forensic Lab Examination 1991:

Bloodstains located on left strap
Animal hairs
Fibers including: red & green cottons; green
nylon-type; yellow acrylic
Yellowish stains gave negative results when
tested for acid phosphatase.

ITEM # K-21 Panties of the Victim (Q-17)

FBI Report 12/05/75:

No hairs dissimilar to victim.

FBI Report 12/31/75:

Human blood, type "A"
No seminal stains located.

Forensic Lab Examination 1991:

Bloodstains noted on inside and outside of
panties.
Stains tested gave negative or very weak
positive results for the presence of acid phosphatase.

ITEM # K-22 Pair of socks from the victim (Q-18, Q-19)
(Photograph #E3)

FBI Report 12/05/75:

No hairs dissimilar to the victim.

FBI Report 12/31/75:

No bloodstains noted.
No seminal stains noted.

Forensic Lab Examination 1991:

No stains noted.
Animal hairs.
Fibers including: green acrylic type;
Gold and pink nylon type; blue mod-acrylic type

ITEM # K- 23 Shirts from the victim (23A and 23B) (Q-20, Q-21)
(Photographs #E4 through #E8)

FBI Report 12/05/75:

No hairs dissimilar to the victim.

FBI Report 12/31/75:

Human blood, type "A" detected.
No seminal stains detected.

Forensic Lab Examination 1991:
Bloodstains, tissue-type material noted.
Vegetative material.
Animal hairs.
Feathers.
Various fibers including: Blue, white,
and yellow Cottons; blue synthetic; clear nylon-type

ITEM # K-24 Dungarees from the victim (Q - 22)
(Photographs #E9 through #E11)

FBI Report 12/05/75:
No hairs dissimilar to the victim.

FBI Report 12/31/75:
Human bloodstains, type "A" blood.
No seminal stains identified.

Forensic Lab Examination 1991:
Bloodstains noted on the inside and outside
of item #K-24.
Several stain areas identified which gave a
weak positive result when tested for the presence of
acid phosphatase. Extracts of these stains gave
negative results when tested for the presence of human
seminal fluid protein.
Animal hairs.
Vegetative materials.
Caucasian head hairs similar to hairs of the
victim.
Caucasian body hairs.
Various fibers including: blue, yellow, and
white cottons; black and blue wools; blue acrylic-type.
Insect parts.

ITEM # K - 25 Blue Jacket from the victim (Q-23)
(Photographs #E12 through #E15)

FBI Report 11/05/75:
No hairs dissimilar to the victim.

FBI Report 11/31/75:
Human bloodstains, type "A" blood.
No seminal stains located.

Forensic Lab Examination 1991:
Bloodstains noted on the inside and outside of
item # K-25.
Vegetative material.
Blue cotton fiber.

Re: ID-75-1277-C
Martha Moxley - victim

Dear Sirs;

On October 31, 1975, at approximately 12:30pm, the body of victim, Martha Moxley, age 15, was found under a conifer tree on the lawn area near her home. Preliminary investigation indicates that the victims' death was due to massive head injuries. The suspected weapon is possibly a #6 iron golf club.

During the course of the investigation the following items were obtained and are being sent to you for your examination:

- K1-K-1 Head hair samples of the victim.
- K2-K-2 Pubic hair sample of victim.
- K3-K-3 Head hair sample of [redacted]
- K4-K-4 Brown paper bag from guest room, 2nd. floor, [redacted] Residence.
- K5-K-5 Contents of garbage can from 2nd. floor bedroom, [redacted] Residence.
- K6-K-6 Contents from garbage can from 1st. floor bathroom, [redacted] Residence.
- K7-K-7 Contents from garbage can, 2nd. floor bathroom, [redacted] Residence.
- K8-K-8 Yellow sheet which was initially used to cover victims' body at crime scene.
- K9-K-9 Two blue sheets used to wrap the victim for removal from crime scene.
- K10-K-10 Left & right foot shoes from victim.
- K11-K-11 Palm scrapings from left hand of victim.
- K12-K-12 Fingernails & scrapings and topaz rings from left hand of victim.
- K13-K-13 Palm scrapings from victims' right hand.
- K14-K-14 Fingernails & scrapings from victims' right hand.
- K15-K-15 Debris from washing body of victim at autopsy.
- K16-K-16 Victims' bra & [redacted]
- K17-K-17 Victims' underpants [redacted]
- K18-K-18 Victims' left and right socks.
- K19-K-19 Two shirts cut off victim at autopsy.
- K20-K-20 Victims' dungarees.
- K21-K-21 Victims' blue nylon-like jacket.

15 NOV 11 1975

ADVISED

No blood on
dungarees &
sweatshirt from
Martha Moxley

Will pick up.

Results

A white head hair of Caucasian origin that has been possibly removed from the scalp and a dark brown to black head hair possessing Negroid characteristics were found on Q6.

A dark brown head hair clipping that has racial characteristics that are indistinct was found on Q9.

The above-described head hairs are dissimilar to those present in the K1, K3 and K10 hair samples and, accordingly, did not originate from any of these sources.

No other hairs dissimilar to those present in the K1 and K2 hair samples were found on or in the items from the victim or the crime scene.

No hairs like those present in the K1 or K2 hair samples were found on or in Q1-Q4 and Q42-Q52.

One head hair of Caucasian origin was found on Q27, and several

head hairs of Caucasian origin were found in the bag containing Q27. These hairs have been broken at the basal (root) end. All of these hairs exhibit the same microscopic characteristics as hairs present in the K1 hair sample and probably originated from this source.

It should be noted that hair comparisons do not constitute a basis for positive personal identification.

No other hairs of any apparent significance were noted.

Nothing of any apparent evidentiary nature was found on the buttons of Q22.

No textile fibers were found in Q10 - Q14.

Present on Q24 are the following laundry marks "MATTHAI-B" and "B-MATTHI".

b6
b7C

Result of examination:

This report confirms and supplements the telephonic reports in this case furnished to [redacted] of your department on November 6 and 21, 1975, to [redacted] on November 10, 1975, and to [redacted] on November 13, 1975.

Group "A" human blood was identified on specimens Q27 and Q36. No blood was identified on specimens Q1 through Q4, Q35, Q39, Q40 and Q42 through Q54.

A white head hair of Caucasian origin that has been forcibly removed from the scalp and a dark brown to black head hair possessing Negroid characteristics were found on Q6.

A dark brown head hair clipping that has racial characteristics that are indistinct was found on Q9.

The above-described head hairs are dissimilar to those present in the K1, K3 and K0 hair samples and, accordingly, did not originate from any of these sources.

No other hairs dissimilar to those present in the K1 and K2 hair samples were found on or in the items from the victim or the crime scene.

No hairs like those present in the K1 or K2 hair samples were found on or in Q1 through Q4 and Q42 through Q52.

One head hair of Caucasian origin was found on Q27 and several head hairs of Caucasian origin were found in the bag containing Q27. These hairs have been broken at the basal (root) end. All of these hairs exhibit the same microscopic characteristics as hairs present in the K1 hair sample and probably originated from this source.

It should be noted that hair comparisons do not constitute a basis for positive personal identification.

No other hairs of any apparent significance were noted.

Nothing of any apparent evidentiary nature was found on the buttons of Q22.

No textile fibers were found in Q10 through Q14.

Present on Q24 are the following laundry marks "MATTH AI-B" and "B-MATTHI."

The K7 specimen from the right front fender contained a piece of metal coated with a green body filler. The body filler was painted as follows:

1. Red enamel
2. Red enamel
3. Brown nitrocellulose primer

The K8 specimen from the right front contained paint particles exhibiting the following layer structure:

1. Red enamel
2. Brown nitrocellulose primer

The K9 specimen from the left front contained pieces of body filler painted in the following manner.

1. Red enamel
2. Brown nitrocellulose primer
3. Thin orange-brown nitrocellulose primer
4. Brown nitrocellulose primer

The Q53 specimen from the cottage contained a few paint particles displaying the following layer structure:

1. Red enamel
2. Fragmentary brown nitrocellulose primer

Microscopic, microchemical and instrumental comparisons disclosed that the red enamel layer of Q53 matched the second red enamel layer of K7, the red enamel layer of K8 and the red enamel layer of K9 in color, texture and type of paint. Accordingly, it was concluded that the red enamel layer of specimen Q53 could have originated from the vehicle represented by specimens K7, K8 and K9. The brown nitrocellulose layer of Q53 was too limited in quantity and too badly crushed for meaningful comparison with K7, K8 and K9.

Crushed onto the Q54 section of wood was a paint particle displaying the following layer structure:

1. Thin red-brown enamel
2. Red enamel
3. Fragmentary red-brown nitrocellulose primer

This paint particle was determined to be different microscopically and microchemically from the K7, K8 and K9 specimens from the vehicle.

The wood fragments in the Q53 specimen from the cottage were painted in the following manner:

1. Light off-white enamel
2. Light off-white enamel
3. White enamel

Crushed onto the K7 specimen from the right front fender was a paint particle displaying the following layer structure:

1. Light off-white enamel
2. Light off-white enamel
3. White enamel

Microscopic, microchemical and instrumental comparisons disclosed that this paint particle in K7 matched the finish on the Q53 wood fragments in colors, textures and types. Therefore, it was concluded that this paint particle in K7 could have originated from the cottage represented by specimen Q53.

White paint smears on the red enamel surface of the paint particles in K8 were too limited in quantity and badly smeared for comparison-type examinations.

No white paint was found in the K9 specimen from the left front.

You are being advised by separate report of the results of the fingerprint examinations of specimens Q27, Q35 and Q36.

The other requested examinations are continuing and you will be advised of the results of these examinations and the disposition of the submitted evidence by separate report.

Dear Sirs:

On October 31, 1975, at approximately 12:30 PM, the body of a murder victim, Martha Moxley, age 15, was found under a conifer tree on the lawn area near her home (deceased)

During the course of our investigation, the following items were obtained and are being sent to you under separate cover for your examination:

Items taken from a 1967 Mercury, Conn. Reg.

1. Paint sample, rt. front, fender - color red
2. Paint sample, ft. front - red and white
3. Paint sample, left front - color red
4. Section of trunk mat
5. Pieces of trunk floor
6. Soiled white towel, taken from trunk
7. Pair shoes from left front of vehicle
8. Debris vacuumed from trunk
9. Debris vacuumed from left front
10. Debris vacuumed from left rear
11. Debris vacuumed from rt. front
12. Debris vacuumed from rt. rear
14. Contents of vacuum cleaner on 11-1-75

b6
b7C

ENCLOSURE ATTACHED

13. Hair sample from head of owner of vehicle
15. Sample of red and white paint and wood from cottage, residence of
16. Section of white wood stanchion, with scrapes and red paint

Will you kindly make the following examinations:

Type all blood found on all submitted samples.
Compare any hair found on any samples with item #13.
Determine if red paint and white paint in items #1, #2 and #3 are the same as #15.

Q54, Q53, K7 → K9 from [redacted] 11/17/75.
Rt. 11/21/75.

advised of paint results 11/25/75 by SA [redacted]

(1)

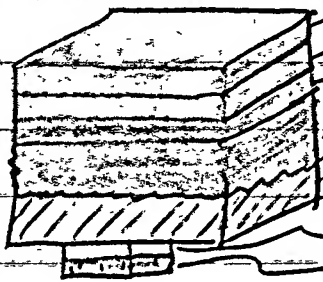

PC-M3356MW

GREENWICH, CONN.

K7 - Paint from right front fender -

Contains a pc. of metal painted as ffs:

(Note - pc. broke off by me accidentally.)

1.) RED ENAMEL (Sh. Wks. on bottom of #1)

2.) RED ENAMEL

3.) BROWN NITRO. PRIMER

4.) GREEN BODY FILLER (Bluish)

5.) METAL

6.) GRAY PRIMER

4.) GREEN MET. NITRO. LACQUER

Brown primer of K7 is browner or more chocolate in color.

Chlor. - neg. (#1 swells about 2X's & can see thru it. #1 doesn't bleed.)

#2 bleeds orang.

Acet. - #3 dissolves

Dipk - #3 + 6 p.s.v.

H₂SO₄ - #1 stays red & color eventually bleaches out; #2 turns & bleaches at once & stays dry

alc. KOH - #1 turns orange & doesn't bleed. Doesn't fade. #2 turns & bleaches maroon. Stays dk.

Crushed onto K7 was one p.p. that matches Q53 (color) in color, texture, l.s. & types. (Same micros + b.c.)

1.) (VERY) LIGHT OFF-WHITE ENAMEL

2.) (VERY) LIGHT OFF-WHITE ENAMEL

3.) (THICKER + MICACCOUS) WHITE ENAMEL

4. Can see seeds on bottom & a few wood fibers.

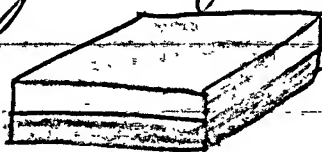

Some of this chip used for micro, b.c. & a sm. amt. ret. in ch. plastic pill box.

Matches Q53 in color, texture, l.s. & types. (Same micros + b.c.)

(2)

PC-M3356MW

KF - Paint from right front -

1.) RED ENAMEL ^{spec of grey paint underneath}
2.) BROWN NITRO. PRIMER

^ Slightly more on bottom of #1 & 2.
A few show traces of a green (fluish) body filler.

Chlor. - #1 bld orange

Acet. - #2 dis.

Dish - #2 pos.

H₂SO₄ - turns + bld. lw. @ once. Stays dark.

alc. KOH - turns + bld. maroon. Stays sh.

Surface of some showing ^{GLOSSY} white enamel smears. Too limited + badly smeared (contaminated + red) for meaningful comp. w/ glossy wte en. in Q53.

 WTE EN SMEARS (GLOSSY)

Chlor + acet - dis a bit. Dish neg. remains wte. Doesn't bubble. By dish it's diff. from Q54 wte which turns sl. darker + bubbles + Q53 which darkens.

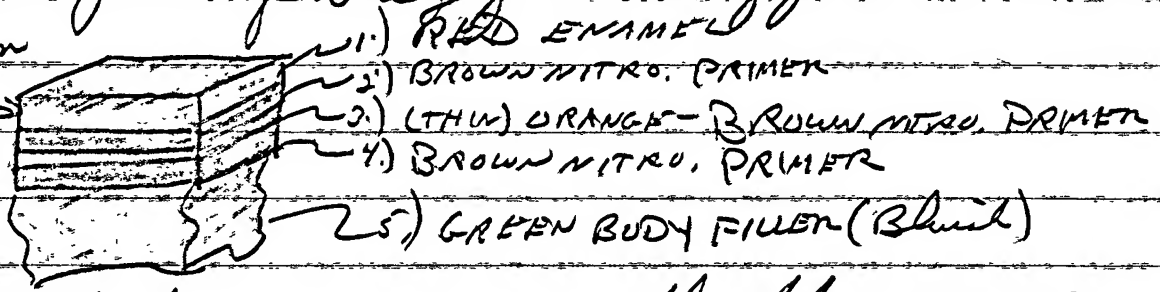

3

PC-M3356MW

K9 - Paint from left front -

Contains spec. of body filler as ffs:

Very st. sly mbr on bottom of #1 + top of #2.

NOTE: The brown primers are redder than K7 + K8.

Color - my (#1 flt. orange)

Act. - #2 + 4 dis.

Orig. - #3, 4 + 5 pos.

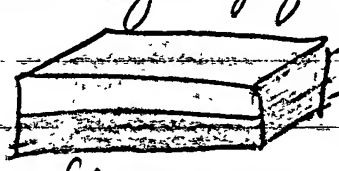

HoSA - #1 flt + turn lev. at once. Stage dk.

alc. KOH - #1 turn + blk, maroon, Roman dk.

No LUTE. PAINT IN K9.

Q53 - Paint + wood from collage of [redacted]

Contains a few p.p. or ffs:

b6
b7C

1.) RED ENAMEL
2.) FRAG. BROWN NITRO. PRIMER
(Smushed) so can't match color w/ K7/K8/K9.

(+ some gum mbr on one.)
Can see sly mbr on bottom of #1 but can't tell about #2 due to "smushing".

#1 matches K7 #2, K8 + K9 red on layers in color, texture + type.
(Same mbr + b.g.)

#2 too little to compare color. Red + brown p. only in K7 #2 + 3, K8 + K9.

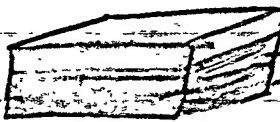

Differences noted when 3 layers of Q53 run on (K7, K8 + K9). Primers clear + run again + some same color for red only of same extent if 3 p.p., one of which remains in intense prob. due to diff. See p.p. for cont. of Q53 + white paint.

(4)

PC-M3356MW

Q54 - Section of wooden structure -

Crushed onto surface was one p.p. as fba: (Photo taken.)

1.) RED-BROWN ENAMEL (~THIN FILM) waxy looking.

2.) RED ENAMEL

3.) RED-BROWN NITRO. PRIMER (Definitely a primer or sealer chlon.)

Chlor-mez (#2 doesn't bld)

Acet-mez

Diph. - #3 pos.

H₂SO₄ - #1 bld + turns grey. #2 bld + turns not low.

alc. KOH - #2 bld + orange + turns orange. #1 turns orange + fades a little. Both layers diff. from K7, K8 + K9.

D.F. = from K7, K8 + K9.

White paint finish on stud cut + port in a flat, coarse enamel (1 layer) Chlor, acet-mez. Diph - bubbles + turns sl. darker.

Red. smear on Q54, no value. Some light brown soap to right of smear.

Red Strips on either side are rectangular tags on al. Bubbles in w. NaOH.

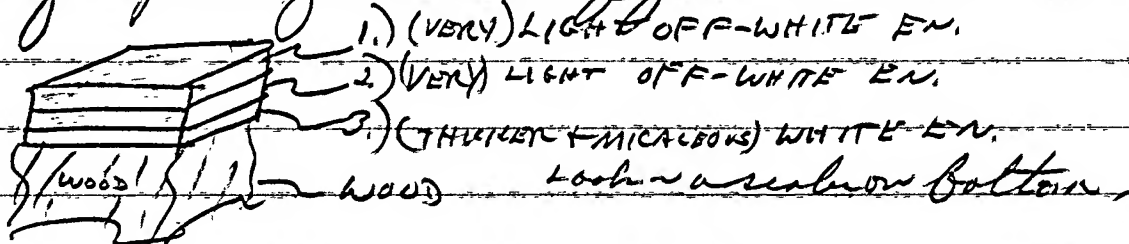

Part of chip in chlor + then put in ch. + starting pillow along w. another unaval. portion of chip. To be ret. to cont.

51

PC-M3356MW

Q53 - Cont -

Wood fragments painted as ffs.

Chlo, acet - neg.
Dish - neg (darkens in color) Can see 2 upper layers in dish.

Chlo -

red smear of paint.
WHITE EN. (GLASSY)

Chlo + acet - diss. a bit.
Dish - stays white.

Dict

PC-M3356

b6
b7C

The K7 specimen from the right front fender contained a piece of metal coated with a green body filler. The body filler was painted as follows:

- 1.) RED ENAMEL
- 2.) RED ENAMEL
- 3.) BROWN NITROCELLULOSE PRIMER

The K8 specimen from the right front contained paint particles exhibiting the following layer structure:

- 1.) RED ENAMEL
- 2.) BROWN NITROCELLULOSE PRIMER

The K9 specimen from the left front contained pieces of body filler painted in the following manner:

- 1.) RED ENAMEL
- 2.) BROWN NITROCELLULOSE PRIMER
- 3.) THIN ORANGE-BROWN NITROCELLULOSE PRIMER
- 4.) BROWN NITROCELLULOSE PRIMER

The Q53 specimen from the cottage contained a few paint particles displaying the following layer structure:

- 1.) RED ENAMEL
- 2.) FRAGMENTARY BROWN NITROCELLULOSE PRIMER

Microscopic, microchemical and instrumental comparisons disclosed that the red enamel layer of Q53 matched the second red enamel layer of K7, the red enamel layer of K8 and the red enamel layer of K9 in color, texture and type of paint. Accordingly,

(5)

DICT- CONT. -

b6
b7C

it was concluded that ~~the~~ ^{the} red enamel ~~layer of specimen~~ ^{Q53} ~~could have originated from~~ ^{could have originated from} the vehicle represented by specimens K7, K8 and K9.

^{and too badly crushed} The brown nitrocellulose layer of Q53 was too limited in quantity for meaningful comparison with K7, K8 & K9.

Crushed onto the Q54 section of wood was a paint particle displaying the following layer structure:

- 1) THIN RED-BROWN ENAMEL
- 2) RED ENAMEL
- 3) FRAGMENTARY RED-BROWN NITROCELLULOSE PRIMER

~~Microscopic and microchemical comparison indicated that~~

This paint particle was determined to be different microscopically and microchemically from the K7, K8 and K9 specimens from the vehicle.

The wood fragments in the Q53 specimen from the cottage were painted in the following manner:

- 1) LIGHT OFF-WHITE ENAMEL
- 2) LIGHT OFF-WHITE ENAMEL
- 3) WHITE ENAMEL

Crushed onto the K7 specimen from the right front fender was a paint particle displaying the following layer structure:

(2)

DICT- CONT.

b6
b7C

- 1) Light off-white enamel
- 2) Light off-white enamel
- 3) White enamel

Microscopic, macrochemical and instrumental comparisons disclosed that the paint particle in K7 matched the finish on the Q53 wood fragments in colour, texture and type. Therefore, it was concluded that this paint particle in K7 could have originated from the cottage represented by specimen Q53.

White paint smears on the red enamel surface of the paint particles in K8 were too limited in quantity to be smeared for comparison type examinations.

No white paint was found in the K9 specimen from the left front.

Result of examination:

This report supplements the FBI Laboratory report dated December 5, 1975, and confirms and supplements the telephonic report furnished to on December 15, 1975. For a detailed listing of the evidence, please refer to the FBI Laboratory report dated December 5, 1975.

Group "A" human blood was identified on specimens Q6, Q7, Q17, Q20 through Q23, Q28, Q33 and Q34. Human blood which was too limited in amount for grouping purposes was identified on specimens Q7A, Q8, Q9, Q13, Q14, Q16, Q25, Q30, Q31 and Q37.

No blood was identified in or on specimens Q5, Q10, Q11, Q12, Q15, Q18, Q19, Q24, Q26, Q29, Q32, Q38, Q39 and Q40.

This examination has been made with the understanding that the evidence is connected with an official investigation of a criminal matter and that the Laboratory report will be used for official purposes only, related to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of the Laboratory report in connection with a civil proceeding.

Examination requested: Microscopic Analyses

Specimens:

K12 Head hair sample from
K13 Head hair sample from
K14 Head hair sample from

b6
b7C

Result of examination:

The white head hair of Caucasian origin and the dark brown to black head hair possessing Negroid characteristics previously found on Q6 (FBI Laboratory report PC-M1391 dated December 5, 1975) and the dark brown head hair clipping previously found on Q9 (PC-M1391) are microscopically dissimilar to the hairs present in K12 through K14. Accordingly, these hairs and head hair clipping could not be associated with any of these known hair sources.

Specimens K12 through K14 are being returned as enclosures to this report.

This examination has been made with the understanding that the evidence is connected with an official investigation of a criminal matter and that the Laboratory report will be used for official purposes only, related to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of the Laboratory report in connection with a civil proceeding.

November 10, 1975

Director
Federal Bureau of Investigation
United States Department of Justice
Washington, D.C. 20535

Attn: FBI Laboratory

Dear Sirs:

On October 31, 1975, at approximately 12:30 PM, the body of a murder victim, Martha Moxley, age 15, was found under a conifer tree on the lawn area near her home.

During the course of our investigation, the following items were obtained and are being sent to you under separate cover for your examination:

Items taken from a 1967 Mercury, Conn. Reg.

- 1. Paint sample ^{from} front, fender - color red.
- 2. Paint sample ^{from} rt. front - red and white
- 3. Paint sample ^{from} left front - color red
- 4. Section of trunk mat
- 5. Pieces of trunk floor
- 6. Soiled white towel, taken from trunk
- 7. Pair shoes from left front of vehicle
- 8. Debris vacuumed from trunk
- 9. Debris vacuumed from left front
- 10. Debris vacuumed from left rear
- 11. Debris vacuumed from rt. front
- 12. Debris vacuumed from rt. rear
- 13. Contents of vacuum cleaner on 11-1-75

13. Hair sample from head of owner of vehicle

15. Sample of red and white paint and wood from cottage, residence of

16. Section of white wood stanchion, with scrapes and red paint

Will you kindly make the following examinations:

Type all blood found on all submitted samples.
Compare any hair found on any samples with item #13.
Determine if red paint and white paint in items #1, #2 and #3 are

Prior sub. this case.

Result of examination:

This report supplements and completes the
FBI Laboratory reports in this case dated December 5, 1975,
and December 31, 1975. For a detailed listing of the
evidence, please refer to the report dated December 5, 1975.

No plant material like that present in specimens
Q13, Q15, Q24 through Q26, Q28 through Q30, Q33, Q34, Q37
and Q38 was found in or on the items from the
residence, the items from the residence or specimens
Q42 through Q52.

b6
b7C

Specimen X4 was too decomposed to allow identification
or to be of value for comparison purposes.

This examination has been made with the understanding that the evidence is connected with an official
investigation of a criminal matter and that the Laboratory report will be used for official purposes only, related
to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of the
Laboratory report in connection with a civil proceeding.

The pieces of wood in specimen Q53 are too fragmentary to allow comparison with woods composing the Q54 specimen.

Specimens K5 and Q32 consist of pebbles, rock fragments and fine sand along with a small amount of plant items and grass blades.

Specimen K6 consists of pieces of pebble-asphalt surfacing material and coarse sand grains.

Nothing which could be associated with specimens K5, K6 or Q32 was found on or in specimens Q39, Q40 and Q45 through Q52.

The submitted evidence will be retained in the FBI Laboratory until called for by a representative of your department.

DICT ATT

The broken ends exhibited by specimens Q27, Q35 and Q36 bear characteristics which indicate that all of the fractures were initiated and propagated by the same kind of force application, i.e. reverse bending. None of the broken ends, including the end of specimen Q27 from which the missing handle portion was broken, exhibit any indications that the fractures occurred at different periods of time. It is not possible to determine by laboratory examination of the specimens when the fractures occurred.
